

## Zelus Assessment Questions

**Question 0.** 2, I have seen cricket videos before but do not have any knowledge about the rules of the game.

**Question 3.** I would edit the solution by uploading data daily or trigger the upload of data each time a game ends and the data is available. A proper data orchestration tool to execute the code would enable this. I would add some data validation to the upload process to ensure that we receive the data as expected. I would segment the transformation code as much as possible for organization and efficiency in troubleshooting any issues that could arise.
